

COMPANY PROFILE

مؤسسة ألفا بيتا لتقنية المعلومات

A SAUDI ENGINEERING HOUSE — EASTERN PROVINCE

Alpha Beta Information Technology We engineer facility systems.

A Saudi engineering house based in the Eastern Province, specializing in security surveillance, networking, access control and smart building systems — designed, delivered, documented and maintained under one written engineering standard.

ABOUT US

An engineering house — not an installation contractor

Founded in the Eastern Province, Alpha Beta has grown alongside its clients — homeowners and organizations alike. We do not simply supply and install equipment: we engineer the system before procurement, execute it against a written standard, document the handover, and operate it under formal maintenance contracts. Our benchmark is a system that performs reliably one year — and five years — after delivery.

Why “Alpha Beta”? The name is the method

Alpha and Beta are the first two letters of the Greek alphabet, and they define how we work. Alpha stands for mastery of fundamentals — the groundwork every reliable system is built on. Beta, in the language of the technology industry, is the discipline of testing and continuous refinement: never settling for a system that merely works today, but engineering one that keeps working years from now. The same two initials sign our proprietary engineering standard: AB-570.

Our mission

To keep our clients' facility systems running with full reliability — correct foundations from day one, documentation that protects the owner, and maintenance that does not end at handover.

Our vision

To be the Eastern Province's leading engineering reference for security and smart facility systems.

Our objectives

Establish AB-570 as the regional benchmark for correct system foundations, build long-term maintenance partnerships, and deliver a fully documented digital operations experience.

**800+**

Principles we do not compromise

- ✓ We recommend what fits the site — not what costs most
- ✓ Client names and site imagery are never published without written consent
- ✓ Genuine parts, backed by authorized-distributor warranty
- ✓ Itemized, transparent proposals — no surprises after signing
- ✓ Maintenance is a written contract with documented visits — never a verbal promise
- ✓ We own our mistakes and correct them at our expense, through a published complaints channel

REGISTRATION & ACCREDITATION

A registered and accredited Saudi entity

Alpha Beta is a formally registered Saudi establishment with a verified tax identity, accredited by the official authority governing security surveillance systems in the Kingdom.

**Commercial Registration****2053118284**

Alpha Beta Information Technology Est. — Eastern Province

**VAT Registration****310900082400003**

VAT-registered with compliant electronic invoicing

**Accredited on the “Amn” platform — Public Security**

Alpha Beta is an accredited provider on the national security-surveillance compliance platform operated by Public Security. We audit the system, prepare the full compliance file to the official requirements, and submit it on the owner's behalf through to final approval.

GEOGRAPHIC COVERAGE

Eight cities across the Eastern Province

**Dammam****Khobar****Dhahran****Jubail****Qatif****Sayhat****Safwa****Ras Tanura****Homes & villas****Residential compounds****Retail & commercial facilities****Offices & clinics****Warehouses & industrial sites****Projects under construction**

OUR SOLUTIONS

Six domains of expertise

Designed, delivered and maintained under a single contract and a single point of accountability — from study and design through operation and preventive maintenance.

Security surveillance systems

Coverage is engineered before procurement — the right coverage matters more than the camera count.

- High-resolution IP cameras with regulation-compliant retention
- License-plate recognition (LPR) and intelligent analytics
- Full compliance with “Amn” platform requirements

Networks & infrastructure

Wired and wireless networks designed on measured coverage — not guesswork.

- Structured Cat6/Cat6A cabling with labeled, documented cabinets
- Site-surveyed Wi-Fi coverage for villas and facilities
- PoE switching and managed networks for small business

Intrusion protection & smart alarm

Intrusion alarm systems that deliver instant alerts to the owner's phone.

- Certified door, motion and glass-break sensors
- Camera integration for visual alarm verification
- Battery-backed autonomous operation during power outages

Access control

From a single door to a multi-entrance facility — governed permissions and a complete entry log.

- Fingerprint, card, PIN and facial credentials
- Electric locks and pedestrian gates
- Exportable attendance and access reports

Smart intercom & video entry

See and answer the door from a mobile device — from anywhere.

- Video intercom for villas, buildings and compounds
- Remote door release with smart-home integration
- Integrates with surveillance and access control

Maintenance & service contracts

An unmaintained system fails silently — our contracts are built to prevent that.

- Scheduled preventive visits, documented with reports and photos
- Fault response under clear contractual priority
- Annual full-system health check and condition report

WHAT SETS US APART

AB-570 — our written engineering standard

Most system defects can only be fixed by breaking finished work. That is why we authored our own internal standard for foundations and execution — every project we deliver is executed against it and handed over with a signed compliance record.

105

mandatory clauses

Revision 1.1

A written standard — not individual judgment

The standard governs the full project lifecycle: pre-pour and pre-finishing conduits, routing and cabinet selection, labeling, testing and documentation. The result is a system that any qualified party can inspect, extend and maintain — at any time.

Foundations & conduits

Routes, piping and points before finishing — no demolition later

Labeling & documentation

Every cable and port labeled and recorded in the handover file

Testing & compliance

Point-by-point testing and a signed compliance record at handover

Why it matters to the owner: a system built on a written standard is not tied to the individual who installed it. Any qualified engineer can maintain or extend it from the documentation — protecting the owner's investment across the life of the building, and making acceptance an objective, measurable process rather than a matter of impressions.

HOW WE WORK

Four phases — one point of accountability

1

Study & design

Site survey, requirements capture, and full system and coverage design before any procurement — with an itemized proposal.

2

Execution to AB-570

Delivery governed by the standard: clean routing, organized cabinets, complete labeling, and genuine parts under distributor warranty.

3

Testing & handover

Point-by-point testing, a signed compliance record, and delivery of the complete system file (drawings, labeling, credentials).

4

Operation & maintenance

Written maintenance contracts with documented periodic visits and clearly prioritized fault response.

A digital operations platform — dedicated client portal

We developed our own operations platform (contracts.abtech.sa) to manage the full contract and maintenance lifecycle electronically — every engagement is documented and available to the client at any time:

- ✓ Electronic contracts with unified references and verified signatures
- ✓ Maintenance visit records with reports and photos
- ✓ Service and fault requests with live status tracking
- ✓ Automated notifications via WhatsApp and SMS
- ✓ Official QR-code document verification
- ✓ Secure one-time-passcode (OTP) sign-in

Team capabilities: surveillance and network system design · AB-570-certified execution · “Amn” platform compliance processing · contracted support and maintenance — a team presented by capability, not by name, consistent with our confidentiality policy.

Our commitments in projects and tenders

- Detailed technical and financial proposals with itemized quantities
- A clear delivery schedule across execution phases
- Full adherence to the client's requirements and tender terms
- Electronic invoicing compliant with ZATCA requirements
- Workmanship warranty and genuine parts under distributor warranty
- Complete system documentation delivered to the owner

TECHNOLOGY PARTNERS

Brands and technologies we work with

We work with trusted global brands across every domain, and recommend what best fits each site and requirement — not what costs most. Parts are genuine and warrantied by the authorized distributor.

All trademarks are the property of their respective owners and are shown to indicate the technologies used in our delivered projects.

Client confidentiality policy

- ✓ We never publish client names or site imagery in any marketing material without written consent. A reference list is available to official entities upon request, subject to the approval of the clients concerned.

IN SUMMARY

Why Alpha Beta?

**Official accreditation**

Accredited on the “Amn” platform operated by Public Security — we manage the full compliance file on the owner’s behalf.

**A written engineering standard**

AB-570, Revision 1.1 — 105 clauses that make acceptance objective and measurable.

**A digital operations platform**

Contracts, visits and requests — electronically documented and available to the client at any time.

**Deep local experience**

800+ clients across eight Eastern Province cities — homeowners and organizations, under ongoing maintenance contracts.

**Single accountability**

Design, delivery, documentation and maintenance under one contract — no fragmentation across vendors.

**Documented responsiveness**

Published contact channels, complaint acknowledgment within one business day, and clear escalation to management.

Documents available upon request

- Commercial Registration certificate
- Proof of “Amn” platform accreditation
- Sample maintenance contracts and periodic reports
- VAT registration certificate
- AB-570 standard — introductory summary
- Further statutory documents per each tender’s requirements
